3. (w05_3_xxxxxxxxx.py) find_max [Attachment] Create a function named
`find_max` that takes 2 parameters: `num1` and `num2`. The function must evaluate
and **return the highest number** between 2 parameters. The main program will
print out the result on screen

Function Specification:
```
def find_max(num1,num2):
    # Return max value between num1 and num2
```

Input	Output
3 5	5
75 2	75
33 -73	33
22 22	22
